MODEL NO.         FACTORY WIRED
S6A1              460V 3P
SERIAL NO.        
960137

HP             60       R.P.M.  
PHASE           3        HERTZ   60
VOLTS           460       AMPS   65

CAUTION — Ground unit at control before starting.
CHECK rotation. Apply power. If whole unit reacts
counter clockwise, rotation is correct.
CHECK oil level in motor periodically. Avoid entrance
dirt or water to motor. Use only Gorman-Rupp
submersible pump or factory approved alternate.
MAINTAIN oil level in seal chamber. If contaminated
with water, oil may appear milky. If more than 30%
water after settling, seal should be inspected — use
same oil as for motor.

IMPORTANT — When ordering parts, provide pump serial and model number.
